Dear Vision Center Practitioners,

Nidek was founded in Gamagori, Japan in 1971, and continues to be a global leader in the manufacture and distribution of products for ophthalmology, optometry, and other healthcare products. We are celebrating over 25 years in the United States, and our commitment to customer satisfaction is only exceeded by our dedication in providing patients with the highest level of eye care possible.

Nidek offers a wide array of equipment designed for the diagnosis and treatment of retinal diseases, glaucoma, and other vision-impairing afflictions. Our aim is to provide products of unmatched quality, service, and value. Nidek manufactures equipment that is sold by Nidek Inc., Marco Ophthalmic, and Santinelli International.

Our goal with the Advanced Instrument Program is to provide equipment that improves and develops your practice. The AFC ProPhotographer is the only fundus camera with 3D alignment and tracking, Autofocus, Autoshot, with both internal and external images at one of the highest resolutions available. This is also the only camera with true automatic stereo imaging for the tracking of glaucoma progression.

Nidek commitment to your success is reflected in our participation in this program. We will continually work with the Wal-Mart Optical Division to meet and exceed the needs of your practice.

I want to thank you for considering Nidek for your equipment purchase. Please contact any of our Regional Sales Managers to discuss your equipment needs.

Sincerely,

A handwritten signature in black ink, appearing to read "Hiro Matsuzaki".

Hiro Matsuzaki
Division Manager of Sales & Marketing
